Activated Carbon Engineering, Sales and Service

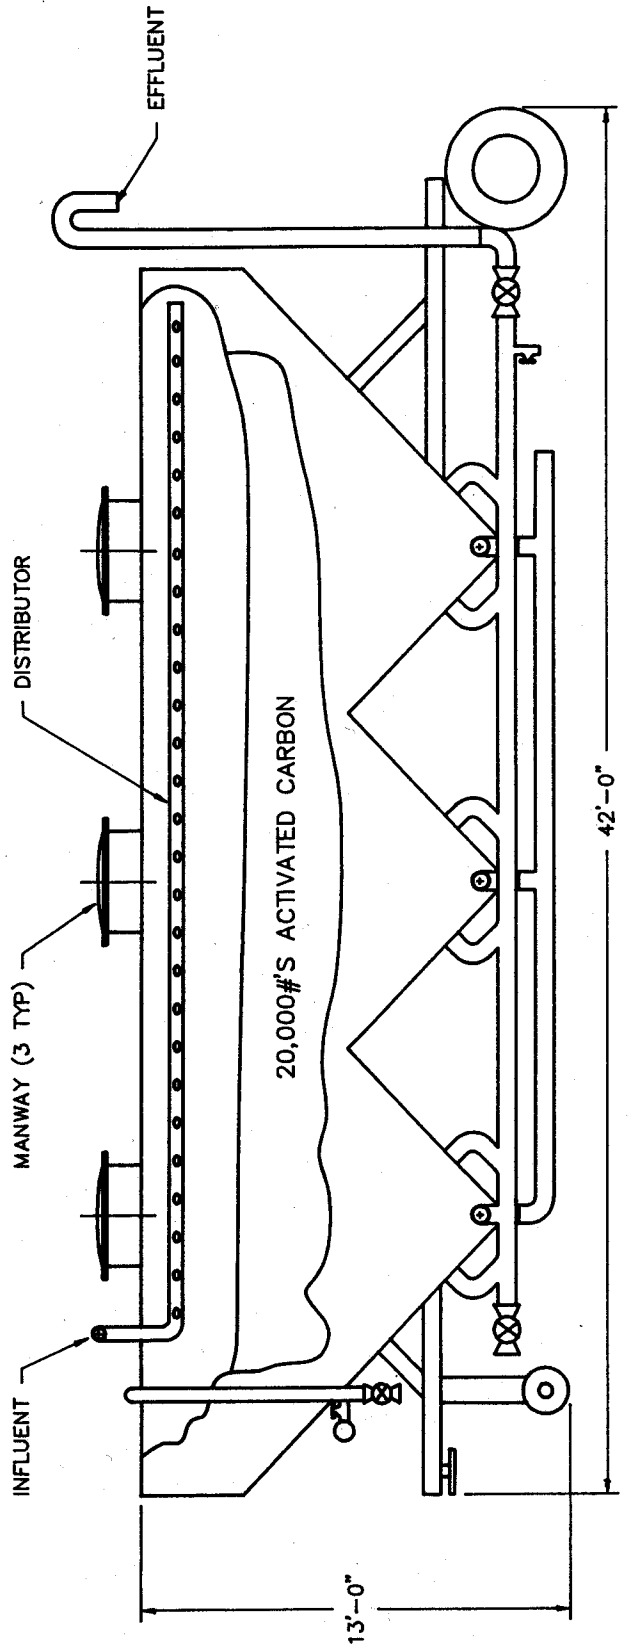

MOBILE LIQUID 20,000

The Mobile Liquid 20,000 is available for temporary liquid phase treatment projects to serve a wide variety of applications. Popular uses include dewatering, hydrotest water and wastewater treatment during intermittent product manufacturing. We utilize these adsorbers for flows up to 250 gpm. Higher flows are possible with multiple trailer units in parallel stages. The Mobile Liquid 20,000 is based on a bulk carbon transport trailer, but our units have been specially modified with internal components to provide proper water flow and carbon utilization. They can contain any quantity of carbon between 8,000 and 20,000 lbs., to best match the needs of your specific application. When the units become spent or the project is complete, they can simply be transported off site for service. Please call your STI representative for further information and site specific pricing.

MAXIMUM FLOW: 250 GPM
MAXIMUM PRESSURE: 12 PSIG
MAXIMUM TEMPERATURE: 100°F

- * EMERGENCY RESPONSE READY
- * VIRGIN OR REACTIVATED CARBON FILL
- * ONE PRICE INCLUDES: DELIVERY, SET-UP, RENTAL, REMOVAL & SPENT CARBON REACTIVATION.#

Based on a non-Hazardous Waste spent carbon classification. Surcharges will result for Hazardous transportation, analysis and recycling/disposal.
